

SUSTAINABLE WATCH

CMVM publishes the *Relatório sobre a atividade de capital de risco 2023*

Main goal: present the highlights of the sector and the conclusions of the supervision of the venture capital activity in Portugal

In terms of sustainability, the report highlights that in 2023 the CMVM organised two supervisory actions. The first was a follow-up on compliance with the requirements to disclose information to investors on sustainability under the terms of the SFDR, and the second was on compliance with the obligation to publish the 'Statement on the principal adverse impacts of investment decisions on sustainability factors'.

In this context, the report identifies the results of these supervision actions, highlighting some of the weaknesses identified within the scope of the disclosure requirements applicable to the sector.
